The latest pooled estimates from the EuroMOMO network show a marked increase in excess all-cause mortality overall for the participating European countries, related to the COVID-19 pandemic. This overall excess mortality is driven by a very substantial excess mortality in some countries, primarily seen in the age group of 65 years and above, but also in the age group of 15-64 years. Data from 24 participating countries or regions were included in this week’s pooled analysis of all-cause mortality in Europe.

The number of deaths in the recent weeks should be interpreted with caution as adjustments for delayed registrations may be imprecise. Furthermore, results of pooled analyses may vary depending on countries included in the weekly analyses. Pooled analyses are adjusted for variation between the included countries and for differences in the local delay in reporting. Further details are available on http://www.euromomo.eu.
Pooled number of deaths

EuroMOMO: week 14, 2020

Year week

0-4 years
5-14 years
15-64 years
65+ years
All ages

- Stratified baseline
- Delay-adjusted number of deaths
- Normal range (+- 2 z-scores)
- Substantial increase (4 z-scores)

Participating countries:
Austria, Belgium, Denmark, Estonia, Finland, France, Germany (Berlin), Germany (Hesse), Greece, Hungary, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, UK (England), UK (Northern Ireland), UK (Scotland), UK (Wales)
